

Have you considered participating in a clinical study?

HATAICHANOK SINGHASENI
Hataichanok lives with obesity

If you are living with obesity and knee osteoarthritis (OA) then the AMAZE 5 study may be for you. This study investigates the effect of an experimental medicine on weight loss and OA related pain

You may participate in the AMAZE 5 study if you fulfil the following

- Have a Body Mass Index ≥ 27
- Have a clinical diagnosis of knee OA and experience pain due to this
- Be 18 years or older
- Be able and willing to adhere to study procedure

What do you need to do?

- Inject the study medicine or placebo with an easy-to-use injection pen once a week
- Attend regular study-related health checks and medical tests incl. having blood samples taken
- Maintain a dosing diary and complete questionnaires using a study device
- Stay connected with the study staff during the study at regularly scheduled visits
